# Python User Input

## User Input

Python allows for user input.

That means we are able to ask the user for input.

The method is a bit different in Python 3.6 than Python 2.7.

Python 3.6 uses the `input()` method.

Python 2.7 uses the `raw_input()` method.

The following example asks for the username, and when you entered the username, it gets printed on the screen:

### Python 3.6

```
username = input("Enter username:")  
print("Username is: " + username)
```

### Python 2.7

```
username = raw_input("Enter username:")  
print("Username is: " + username)
```

Python stops executing when it comes to the `input()` function, and continues when the user has given some input.
